

## Environmental Policy

*Our business concept is based on supplying pre-schools and schools with products for developing their learning environments. A sound general perspective on environment and the processes around environmental issues plays an important role for learning environments.*

Lekolar shall:

1. Consider the environmental aspects of all its activities.
2. Work towards ecologically sustainable development by undertaking economically reasonable actions to limit the company's environmental effect and through preventative measures reducing risks for pollution.
3. Treat environmental laws and regulations as minimum requirements that shall be exceeded at all times.
4. Regard environmental work as a continuous process of improvement.
5. Develop an action plan based upon this policy that shall be examined and adapted periodically for the prevailing circumstances and new experiences in the environmental area.
